General

Eaton's Cooper Power™ series VR-32 single-phase step voltage regulators are tap-changing autotransformers. They regulate distribution line voltages from 10% raise (boost) to 10% lower (buck) in 32 steps of approximately 5/8% each. Voltage ratings are available from 2400 volts (60 kV BIL) to 34,500 volts (200 kV BIL) for 60 Hz and 50 Hz systems.

Internal potential winding taps and an external ratio correction transformer are provided on all ratings so that each regulator may be applied to more than one system voltage.

Smaller kVA sizes are supplied with support lugs for pole mounting and with substation or platform tie down provisions. Larger sizes are provided with substation bases with pad-mounting provisions.

Voltage is maintained within desired limits by controls that feature superior accuracy, reliability, and serviceability. Continuity of service is assured by rugged, service-proven tap-changers and core-and-coil assemblies functioning with the control.

Eaton's Cooper Power series voltage regulators are available with a full complement of standard features for routine applications, as well as a full line of optional accessories for unique applications. In addition, the regulator offers desirable features that enhance operation and service.

Figure 1. External features on the VR-32 voltage regulator

Standard features

A sealed-tank construction allows the use of a 65 °C rise insulation system in 55 °C rise rated designs to provide an additional 12% capacity above the nameplate rating without loss of normal insulation life. Additional load capacity is stated on the nameplate, this ADD-AMP™ feature is available as long as the tap-changer's maximum current rating is not exceeded.

The unit construction cover suspends the internal assembly, consisting of the core-and-coil assembly, tap-changer, and the reactor, for ease of inspection and maintenance.

All Eaton's Cooper Power series voltage regulators are manufactured and tested to the IEEE Std C57.15™-2009 standard.

- CL-7 control
- Tap-changer with motor and power supply
- Position indicator with ADD-AMP adjustment
- Two laser-etched nameplates
- Lifting lugs
- Oil drain valve and sampling device
- Upper filter press connection
- Oil sight gauge
- Mounting provisions for shunt arresters
- High-creep bushings with clamp-type connectors
- Bolt-down provisions (overhead units)
- Pole-type mounting brackets (overhead units)
- Substation base (substation units)
- External series arrester
- Automatic pressure relief device
- Handhole
- Control cabinet with removable front panel
- Ratio correction transformer
- Conformally coated circuit boards

Optional accessories

- Shunt arresters
- Extra-length control cables
- Elevating structure
- 4-hole NEMA® H-spades
- Cooling fans
- Nameplates in alternate languages or metric units
- Internal differential potential transformer for complete reverse power flow w/metering
- CL-7 control accessories
 - Multi-phase functionality
 - Front panel overlays in alternate languages

- Serial communications interfaces:
 - RS232
 - Fiber Optic - ST
 - RS485
- Ethernet communications interfaces:
 - Fiber Optic - LC, MTRJ, ST, and SC
 - Copper - RJ45
- Communications protocols:
 - DNP 3.0
 - IEC 61850
 - IEC 60870-5
 - 2179
 - MODBUS (Serial)
- 8-input/8-output universal contacts
- 13.5 Vdc radio power supply
- 13 A-Hr control power battery backup
- 48/125 Vdc substation battery power
- 240 V external source

Arresters

Series surge arresters

All VR-32 voltage regulators are equipped with a bypass arrester connected across the series winding between the source (S) and load (L) bushings. This bypass arrester limits the voltage developed across the series winding during lightning strikes, switching surges, and line faults. A MOV type series surge arrester of 3 kV offers series winding protection on all regulators except those rated 22 kV and above, which have a 6 kV MOV-type series surge arrester.

Shunt arresters

A shunt arrester is a recommended accessory on the VR-32 voltage regulator for protection of the shunt winding. The shunt arrester is a direct connected arrester mounted on the tank and is connected between the load bushing and ground. For additional protection, a shunt arrester may also be installed between the source bushing and ground. It is recommended that arresters be applied to all non-grounded bushings. Shunt arrester application data is listed in Table 1.

Table 1. Shunt Arrester Application Data

Regulator Voltage Rating	Nominal System Voltages (volts)		Recommended MOV Shunt Arrester Ratings (kV)
	Delta or Single-phase	Multi-grounded Wye

CL-7 control

- Source-side voltage calculated from tap position
- Internal-external power switch
- Automatic/manual control function switch
- Manual raise/lower toggle switch
- Position indicator drag hand reset switch
- Supervisory OFF switch (for use with SCADA)
- Cell phone-style full alphanumeric keypad
- 4x20 character display
- Control box heater built in
- Multilingual display
- Three date formats
- Six-digit operations counter
- Voltage test terminals
- External source terminals
- Neutral indicating dual LEDs
- Panel-mounted motor fuse
- Metering-PLUS™ one-touch, grouped-data display feature
- Tap-position tracking
- Voltage limiter ("First House Protection")
- Line drop compensation settings

- SOFT-ADD-AMP feature with adaptive functionality
- Duty Cycle Monitor (DCM)
- TIME-ON-TAP™ tap position tracking feature
- PMT™ Preventative Maintenance Tapping feature
- Tap-to-Neutral and Tap-to-Target
- Security override
- Voltage reduction with three modes
- Digital metering package (including instantaneous, demand and time-tagged demand)
- Data profiler
- Configurable status alarms

**Figure 2. CL-7 control**

- Configurable data alarms
- Sequence of Events recording
- USB drive data port
- USB PC port
- Resident communications protocol (DNP 3.0, IEC 60870-5, Serial MODBUS, and 2179)
- CL-6 communications emulation
- Programmable I/O (using logical equations)
- Alternate configuration settings
- Multi-phase operation
- Multi-phase DeltaCalc advanced feature

Construction

Core and coil assembly

Ease of service is provided by the design of the core-and-coil, tap-changer, and reactor assembly. The entire assembly is cover suspended for ease of removal from the tank for inspection or maintenance.

The coil assembly features an aluminum strip in the series winding that achieves the optimum in ampere turn balance for exceptional strength under through-fault conditions.

Grain-oriented steel is used in the core, with a low reluctance lap joint. The rugged core clamp assembly secures the coil effectively and positions the core for the optimum in quiet operation and low core loss.

With sealed-tank construction, the external oxygen supply is eliminated from the tank environment. With the use of a 65 °C rise insulation system and designs with a nameplate rating of 55 °C, an additional 12% capacity is available from Eaton's Cooper Power series 32-step regulator without any loss of insulation life.

Quik-Drive™ tap-changers

The load tap-changer product offering from Eaton's Cooper Power series consists of three Quik-Drive™ tap-changers, the most advanced tap-changers in the industry. Each device is sized for a specific range of current and voltage applications and the devices share many similarities in their construction. The primary benefits of Quik-Drive tap-changers are: direct motor drive for simplicity and reliability; high-speed tap selection for quicker serviceability; and proven mechanical life (one million operations). Common Quik-Drive tap-changer features include: neutral light switch; position indicator drive; safety switches; and logic switches (back-off switches). Quik-Drive load tap-changers meet IEEE® and IEC standards for mechanical, electrical, and thermal performance.

Figure 3. QD3 Quik-Drive tap-changer

Figure 4. QD5 Quik-Drive tap-changer

Figure 5. QD8 Quik-Drive tap-changer

Position indicator and ADD-AMP capability

Exclusive to Eaton, the uniquely designed position indicator offers corrosion resistant materials, an oversized viewing area and a reset solenoid that is replaceable using a single thumbscrew. It is mounted on a junction box on the cover of the regulator, and is directly connected to the tap-changer by a flexible drive shaft passing through the junction box and terminal board via a sealing gland.

The indicator face is graduated in steps, numbered 1 through 16 on each side of zero. Zero designates neutral. Drag hands indicate the maximum and minimum positions attained during raise and lower operations. The drag hands are reset around the position indicator hand by operating the drag hand reset switch on the control front panel.

The ADD-AMP feature of VR-32 regulators allows increased current capacity by reducing the regulation range. This is accomplished by either setting limit switches in the position indicator (HARD-ADD-AMP feature) or enabling the SOFT-ADD-AMP feature to prevent the tap-changer from traveling beyond a set position in either the raise or lower directions. The limit switches have scales graduated in percent regulation, and are adjustable to specific values of 5, 6-1/4, 7-1/2, 8-3/4, and 10% regulation to alter the regulation range. The CL-7 control also allows for an Adaptive ADD-AMP feature which will automatically change the SOFT ADD-AMP setting based upon the current readings of the control.

The five possible load current ratings associated with the reduced regulation ranges are summarized in Table 4 and Table 5. At each setting, a detent stop provides positive adjustment. Settings other than those with stops are not recommended. The raise and lower limits need not be the same value except for locations where reverse power flow is possible.
